

Our electric powertrains are designed to be affordable, efficient, and customizable for your specific application. They can be delivered as Do-It-Yourself kits (DIY) or as complete rolling chassis ready for your production line. They come with a customized lithium battery pack and electric wheel drives or transaxles, so you can get up and running quickly and easily. Traction force, acceleration, and other operations settings are programmed for your specific application, so you can achieve the performance you need without compromise.

Comes with an off-board charger for a fast 0 – 100% charge or an on-board charger for convenient charging in the field. Can be fitted with an IoT-gateway and software to track, configure and service the machine globally.

Shown here as a low-voltage articulated rolling chassis with integrated hydraulics for a compact utility machine. Non-articulated models and high-voltage versions are also available.
