## Danfoss Power Solutions names Mike Hill president of Global Sales

NORDBORG, Denmark – [Danfoss Power Solutions](#), a leading global supplier of mobile and industrial hydraulics as well as electric powertrain systems, has appointed Mike Hill as the president of Global Sales, effective immediately. Previously senior vice president of OEM Sales, Hill will continue to serve as a key member of the Power Solutions leadership team and continue reporting directly to Eric Alström, president of Danfoss Power Solutions. He is based in Clifton Park, New York, U.S. In this role, Hill will be responsible for leading both the OEM Sales and Distribution Sales teams under one organization.

"I am happy to bring two passionate, experienced sales teams together under a simple, streamlined leadership structure. It is important we maintain focus on the distinct OEM and distribution sales channels and continue to work hard to better serve our customers and partners," Hill said.

"Over the past few years, Mike has brought operational focus and rigor to the sales organization, while developing commercial talent and managing customer relationships as we worked through significant supply chain challenges in a high inflationary environment," Alström added.

Prior to joining Danfoss, Hill spent more than 20 years at General Electric in various global commercial leadership positions across the company's Power and Water divisions, in both the U.S. and Japan. Hill also worked for nine years with ABB Power Generation, in both the U.S. and Sweden. He started his career in steam and gas turbine performance/application engineering before moving into sales.

Hill holds a master's degree in business administration from the University of Richmond in Virginia, U.S., as well as a bachelor's degree in mechanical engineering and a minor in international economics from the University of California, San Diego. Hill is a certified Six Sigma quality leader.

**About Danfoss**

Danfoss engineers solutions that increase machine productivity, reduce emissions, lower energy consumption, and enable electrification. Our solutions are used in such areas as refrigeration, air conditioning, heating, power conversion, motor control, industrial machinery, automotive, marine, and off-and-on-highway equipment. We also provide solutions for renewable energy, such as solar and wind power, as well as district-energy infrastructure for cities. Our innovative engineering dates back to 1933. Danfoss is family-owned, employing more than 40,000 people, and serving customers in more than 100 countries through a global footprint of 95 factories.
